

# Why eSuite?

LiveLitigation's eSuite is the only way to participate in litigation events remotely. The feature rich, cloud-based platform emits the essence of attending depositions, trials, hearings, and arbitrations in person, while providing litigation professionals with a set of dynamic tools for conducting more accurate, focused, and collaborative proceedings.

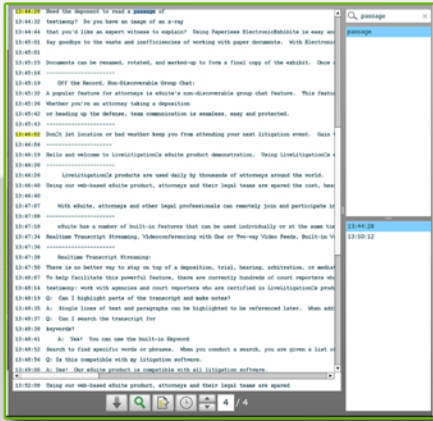

## Intuitive Video Conferencing

With high quality web-based video conferencing built into the eSuite Platform, attorneys can participate in one-way or two-way video conferences using any standard web camera. This allows the attorneys to analyze a witness without being seen, or to conduct face-to-face questioning.

## Easy Digital Paperless Exhibits

Attorneys can electronically introduce, manage, and collaborate on digital exhibit files from within the eSuite platform. In addition to eliminating the disorganization that comes with paper files, using Digital Paperless Exhibits also allows the storing of important documents online in an easily accessible, organized manner.

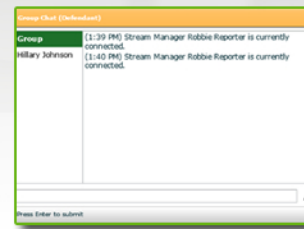

## Interactive Realtime Streaming

eSuite's Interactive Realtime Streaming gives attorneys the ability to remotely follow along with a court reporter's realtime transcript, search for and highlight keywords, add personal notes, create reports, and export data into the litigation viewing software of their choice.

## Secure Non-Discoverable Chat

Sometimes there is a need for legal teams to communicate with each other during litigation events without opposing parties being able to hear. eSuite's Secure Non-Discoverable Chat allows legal teams to communicate off the record with group members, or conduct one-on-one, private conversations.

## Around the Clock Support

LiveLitigation provides free 24/7 support for users of the eSuite platform. Whether it be training, location testing, or issues that may occur during an event, our knowledgeable team of technicians work with you to ensure that you have the best possible experience using the eSuite platform.
